

dataPARC Assistant Interactive Mockup

Agent-Driven User Guide (v3.0)

Version: 3.0 • **Last Updated:** February 23, 2026

What Is This?

The **dataPARC Assistant Interactive Mockup** is an interactive HTML prototype demonstrating an AI-powered chat assistant for dataPARC Users. It showcases how specialized AI agents can help plant operators, process engineers, and maintenance technicians gain insights from process data.

Key Concept: Users select specialized agents that control the assistant's behavior and expertise area - similar to consulting different subject matter experts.

Note: This is a static prototype with pre-scripted responses. It demonstrates visual design & interaction patterns but does not connect to real dataPARC data or use live AI.

Four Specialized Agents

Each agent is a specialist with unique capabilities:

dataPARC Configuration Helper (Default)

- Helps with dataPARC setup, display configuration, alarm rules, etc.

Kamyr Digester Specialist

- Deep expertise in digester operations, H-factor, kappa number

Critical Alert Monitor

- Real-time alarm monitoring with trajectory predictions

Root Cause Analyst

- Incident investigation with timeline visualization

Quick Start Guide

Opening the Mockup

1. Open [dataPARC Process Assistant - Agent-Driven v3.0](#) in a browser
2. **Left pane:** Simulated dataPARC multi-display workspace • **Right pane:** AI Assistant panel
3. Click to see all 4 agents and select one. Interface automatically adapts to show agent's specialty and behavior
4. Click suggestions or type with trigger keywords (see table)

Trigger Keywords for Pre-Scripted Responses

Agent	Keywords	Example	Response
dP Config & Critical Alert	(any text)		Generic helpful response
Kamyr Specialist	analyze, check, excursion, circulation, patterns, correlations	“Analyze H-factor trends, Check circulation patterns”	3 excursions with correlations, action buttons, data sources
RCA Analyst	investigate, timeline, excursion, spike, analyze, contributing	“Investigate excursion, Show timeline”	Timeline (13:55-14:45), contributing factors, recommendations

Key Features

- **Collapsible Panels:** ▼/► toggles for suggestions
- **Auto-scroll:** Smooth scroll to latest message
- **Context Bar:** Shows active agent specialty
- **Thinking Indicator:** 3 pulsing dots (2s delay)
- **Agent-specific:** Unique agent personality with opening messages and triggers

Core Design Principles

1. Context Awareness

The assistant adapts through four specialized Agents:

- **dataPARC Config Helper:** Proactive monitoring with contextual suggestions
- **Kamyr Digester Specialist:** Deep expertise in digester operations
- **Critical Alert Monitor:** Urgent but calm presentation of safety-critical information
- **Root Cause Analysis:** Structured, evidence-based incident investigation

2. Information Hierarchy

Critical information first, with progressive disclosure:

1. Direct answers and key metrics (always visible)
2. Supporting data and correlations (immediately visible)
3. Reasoning and methodology (expandable sections)
4. Data sources and metadata (collapsible sections)

3. Visual Alert Severity

- **Critical Alerts:** Red gradient banner with animation
- **Normal Messages:** Purple accent with subtle styling
- **User Messages:** Blue background for clear identification

4. Data Transparency

All insights include specific data source tags, expandable reasoning sections, clear timestamps, and explicit confidence levels.

5. Respectful Collaboration

Uses "I recommend" rather than "You must"; presents options without forcing choices; acknowledges user expertise.

Quick Reference

Agent	Trigger Keywords	Response Type
 Config	(any text)	Generic helpful
 Alert	(any text)	Generic helpful
 RCA	investigate, timeline, excursion, spike, analyze, contributing	Full RCA w/ timeline
 Kamyr	analyze, check, excursion, circulation, patterns, correlations	3 excursions + data

Technical Overview

Browser: Chrome/Edge (recommended), Firefox, Safari
File: Single HTML file (~65KB). Inline CSS and React. No external dependencies.
Includes: 4 agents, collapsible panels, auto-scroll, triggers
Not Included: No real AI, no live dataPARC data, desktop-only

Next Steps for Production

Backend integration • AI/LLM with agent prompts • Data analysis engine • User authentication • Agent builder (custom agents) • Responsive design • Accessibility • Real-time updates • Internal Testing • Documentation • Pilot Customers

This guide describes version 3.0 of the dataPARC Assistant Interactive Mockup
